Can't find X: Drive on the CoE Windows Computers

Issue

You are looking for the "X:" drive on the Windows Computers at the Honea (CSIL/E1 Lab), Auhll Center, E2 Lab or at the Cooper Lab

Resolution

As of June 30th, there have been some SAMBA changes that does not mount your home directory to the X Drive on the CoE Windows computers when you first log in.

For the moment, you can manually mount your home directory on the computer by following the instructions above listed under For PC on Connecting to a Network/Samba Share.

In the case of the Folder, you would use \samba.engr.ucsb.edu\<username> and you can use whatever letter you wish for the drive.

For example: johndoe would be the username for johndoe@engineering.ucsb.edu.

So the folder you would use would be \samba.engr.ucsb.edu\johndoe
